TELE6530 Lab Module #2

System Performance Monitoring UML

Student full name: Reuben Kwame Comla

Student ID: 002317328

Due date: 2025-09-27

Date of submission: 2025-09-27

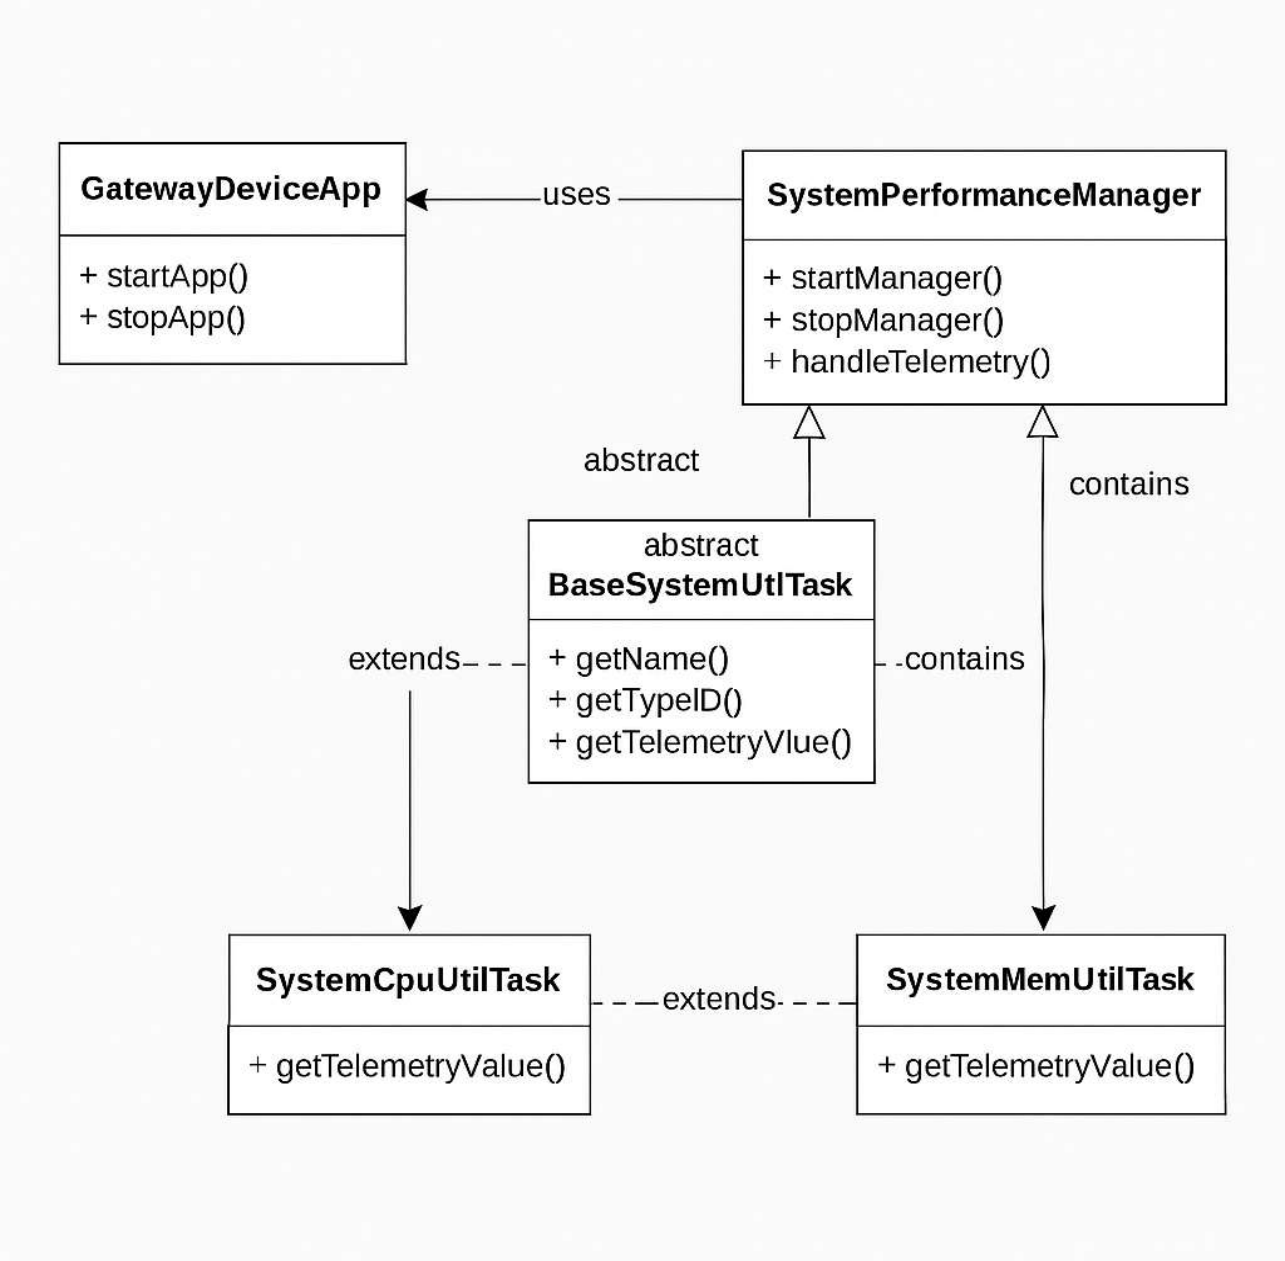

Name of the Word doc submitted: ReubenLab01.docx

Destination for the submission: Canvas/Assignments/Lab02

Your development system's operating environment: Ubuntu 24

Markdown Documentation

My implementation in the Eclipse IDE creates a system performance monitoring solution that automatically collects CPU and memory usage data at configurable intervals. The System Performance Manager organises scheduled telemetry collection from CPU and memory monitoring tasks to provide real-time performance perceptions for IoT gateway devices.
